

INSTALLATION STEPS

1. Use a screwdriver to gently pry out the original door light

2. Unplug the original light from the door and prepare new LED door light

3. Connect the New LED door light with original car plug and put it back to the door

Please note:

Some MINI models have two plastic tabs that slightly interfere with the light replacement. To make installation easier, simply trim away the two tabs with a knife or snips as shown.

The barrel of the light projector can be rotated 360 degrees to position the image as you desire for each door. This can be done while first plugged in and holding over ground before snapping into door socket.
